### DETAILED ACTION

1. **Claims 1-20 allowed.**
2. The following is an examiner's statement of reasons for allowance: **Claims 1-20** are considered allowable because the prior art of record neither anticipates nor renders obvious the limitations of the base claims 1 and 11. **Claim 1** includes an output cord; and a stand, coupled to the output cord, to mount a power module in a substantially vertical orientation, where the stand has a base with a first vertical piece extending from the base to a first fin which extends substantially along the entire length of the stand and extends out from the base away from the module in a first direction, and the base has a second vertical piece extending from the base to a second fin which extends substantially along the entire length of the stand and extends out from the base away from the module in a second direction, also the power module plugs into the stand and defines a first gap along an edge of the first fin which is adjacent to the first side of the power module and extends substantially along the entire length of the stand, and the power module also defines a second gap along an edge of the second fin which is adjacent to the second side of the power module and extends substantially along the entire length of the stand, wherein the stand allows vertical heat dissipation generated by the power module with air flow being vertical through the first and second gaps and along respective substantially vertical surfaces of the power module. **Claim 11** includes an air fan; and a stand, coupled to the output cord, to mount a power module in a substantially vertical orientation, where the stand has a base with a first vertical piece extending from the base to a first fin which extends substantially along the entire length

of the stand and is parallel to the base and the base also has a second vertical piece extending from the base to a second fin which extends substantially along the entire length of the stand and is parallel to the base, also the power module plugs into the stand and creates a first gap along an edge of the first fin which is adjacent to the first side of the power module and extends substantially along the entire length of the stand, and the power module also creates a second gap along an edge of the second fin which is adjacent to the second side of the power module and extends substantially along the entire length of the stand, wherein the stand allows vertical heat dissipation generated by the power module with the air fan generating air flow being vertical through the first and second gaps.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
